Problem Statement :

   In existing, we need to maintain the Excel sheets, CSV etc. files for the user daily and monthlyexpenses. In existing, there is no as such complete solution to keep a track of its daily expenditure easily. To do so a personas to keep a log in a diary or in a computer, also all the calculations needs to be done by the user which may sometimes results in errors leading to losses. There can be many disadvantages of using a manual accounting system. A manual accounting system requires you to understand the accounting process in a way that may be unnecessary with a computerized accounting system. This can be an advantage or a disadvantage, depending on the person doing the bookkeeping; often, a specially trained professional is needed to ensure that accounting is done properly.To reduce manual calculations, we propose an application. This application allows users to maintain a digital automated diary. Expense Tracker application which will keep a track of Income- Expense of a user on a day to day basis.

Says

You Become Financially Aware and Improve Money Management

Makes a plan of your money

Review budget regularly

To calculate net income

Thinks

Is it accurate record of money inflow & outflow?

Is it Possible to track your spending regularly?

Is it Secure Or not?

Whether it is easy to use?

USER

Does

Keeping your finance organized

Saves Money

Prevent you from over spending

Make Decisions

Feels

Maintaining Financial control

Avoiding debt

Improving financial security

Improves money management
